

P&O Utah Point Berth Project

PROJECT LOCATION

Utah Point, Port Hedland, north Western Australia

PROJECT CLIENT

P&O Automotive & General Stevedoring Pty Ltd

PROJECT SUMMARY

Calibre Projects (Brisbane) has completed due diligence for a concept study within the port infrastructure sector for the P&O Utah Point Berth Project.

The main contingent of this desktop study was to provide due diligence on the concept layout of a multi-user, multi-commodity 5Mtpa export terminal to be operated and maintained by P&O. The report investigated the capability of the proposed facility to handle the design throughput at the nominal ship loading rates. This entailed investigating the current design capability and its optimisation potential.

The due diligence report was submitted to the client and subsequent feedback from P&O has proved Calibre's services have value-added to the original design.

ABOUT CALIBRE PROJECTS

Calibre Projects is a results-focused engineering consultancy providing engineering, procurement and construction management services to the resources industry.
